

Assignment: Event Registration Web Form

Objective:

Develop a web form that allows users to register for an event. The form should capture essential details and provide a confirmation upon submission.

Technical Requirements:

Form Fields:

- Full Name
- Email Address
- Phone Number
- Selection of Event Sessions (checkboxes or a dropdown)

Validation:

- Ensure all form fields are validated on the client side.
- Email should follow the correct format.
- Phone numbers should only contain numbers.

Confirmation Page:

- Upon submission, display a confirmation page summarizing the provided details and a unique registration ID.

Server-Side Processing:

- Store the registration details in a server-side file or a database.
- Implement basic server-side validation.

Confirmation Email (Optional):

- Send a confirmation email to the registrant with the details of their registration (if feasible within the scope of the assignment).

Deliverables:

Please submit a zip file or git repository URL
